Computer Performance

Index to Volume 5: 1984

Author

Artis, H P MVS/XA I/O overview 182

Bassiouni, M A and Spirn, J R Workload characterization at the program level — a model for I/O 23

Brumfield, J Operational response-time formulas and their sensitivity to error 7

Cook, J Capacity planning checklist 222

Csontos, E Workload prediction using time-series analysis 70

Curram, J and Leung, C H C Measurement and modelling of an interactive distributed system using operational analysis 178

Das, P K, Bagchi, K K and Bhaumik, B B Validated analytical technique for multiple microprocessor architectures 169

Emrick, R Capacity management of end-user processing 80

Foulk, P W and Nassar, S M Maximal parallelism in FORTRAN-like memory storage recursion problems 108

Foxley, E and Ali, M Hybrid performance modelling method for virtual environments 159

Høie, T Real storage capacity planning 229

Hughes, H Generating a drive workload from clustered data 31

Kinzinger, H, Küspert, K, Meyer-Wegener, K and Peinl, P Integrated environment for performance measurement and in DB/DC system 207

Kraslawsky, W Telecommunications monitors and queue measurement 85

Mohamad, S M A and Cavouras, J C Performance study of descriptor-oriented architectures 14

Nadji, B and Thomasian, A Throughput estimation in queueing networks 197

Nakanishi, T and Menascé, D A Correctness and performance evaluation of a two-phase commit-based protocol for DDBs 38

Pawlita, P W and Südhofen, H-D Role of traffic measurements in information networks 135

Penny, J P and Ashton, P J Measurement and description of time-sharing system response 144

Reddi, A Performance of pipeline and parallel architectures for communication processors 102

Reddi, A Shared-memory performance of multiple computer terminals in parallel distributed information-processing systems 55

Seret, D and Pujolle, G Satellite channels for distributed data systems 153

Suri, R Generalized quick bounds for performance of queueing networks 116

Tempelmeier, T T Operating systems processors in real-time systems — performance analysis and measurement 121

Vince, N C Clustering techniques: a practical application 233

Title

Capacity management of end-user processing **Emrick, R** 80
Capacity planning checklist **Cook, J** 222
Clustering techniques: a practical application **Vince, N C**
Correctness and performance evaluation of a two-phase commit-based protocol for DDBs **Nakanishi, T and Menascé, D A** 38
Generalized quick bounds for performance of queueing networks **Suri, R** 116
Generating a drive workload from clustered data **Hughes, H** 31
Hybrid performance modelling method for virtual environments **Foxley, E and Ali, M** 159
Integrated environment for performance measurement and in DB/DC system **Kinzinger, H, Küspert, K, Meyer-Wegener, K and Peinl, P** 207
Maximal parallelism in FORTRAN-like memory storage recursion problems **Foulk, P W and Nassar, S M** 108
Measurement and description of time-sharing system response **Penny, J P and Ashton, P J** 144
Measurement and modelling of an interactive distributed system using operational analysis **Curram, J and Leung, C H C** 178
MVS/XA I/O overview **Artis, H P** 182
Operating system processors in real-time systems — performance analysis and measurement **Tempelmeier, T T** 121
Operational response-time formulas and their sensitivity to error **Brumfield, J** 7
Performance of pipeline and parallel architectures for communication processors **Reddi, A** 102
Performance study of descriptor-oriented architectures **Mohamad, S M A and Cavouras, J C** 14
Real storage capacity planning **Høie, T** 229
Role of traffic measurements in information networks **Pawlita, P W and Südhofen, H-D** 135
Satellite channels for distributed data systems **Seret, D and Pujolle, G** 135
Shared-memory performance of multiple computer terminals in parallel distributed information-processing systems **Reddi, A** 55
Telecommunications monitors and queue measurement **Kraslawsky, W** 85
Throughput estimation in queueing networks **Nadji, B and Thomasian, A** 197
Validated analytical technique for multiple microprocessor architectures **Das, P K, Bagchi, K K and Bhaumik, B B** 169
Workload characterization at the program level — a model for I/O **Bassiouni, M A and Spirn, J R** 23
Workload prediction using time-series analysis **Csontos, E** 70
